# Deliverables of a Concept Generator

- Computational Creativity

- Quantity beats Quality ?

- Insight about the problem

  - How likely it is to find good solutions for this input?

- Higher Level Assessment of Task and Obtained Solutions

  - knowledge base that learns the connection of task and obtained solutions

Limitations of Precision Position Approach

- Loss of Continuity Information => Defects in Linkage

- Restrictive Objective

  - Mathematically Optimal Solution may not be practically optimal

  - discards a large proportion of numerically sub-optimal solutions with desirable properties
